

Do you suffer from persistent nasal congestion or runny nose?

These symptoms may indicate Chronic Rhinitis

The NEUROMARK® Registry Study is collecting real-world data on the safety and effectiveness of the NEUROMARK System for the treatment of Chronic Rhinitis—and **YOU** may be eligible to participate.

Chronic Rhinitis is known to significantly decrease quality of life and may have an adverse effect on your sleep quality, mood, and daily activities. It's also known to decrease productivity at work, school, and during sports, which may leave you feeling frustrated or exhausted.

25%

Approximately **25%** of Americans suffer from Chronic Rhinitis¹

70%

70% of rhinitis patients report experiencing moderate-to-severe symptoms¹

Chronic Rhinitis refers to the inflammation caused by overactive nasal nerves, which results in symptoms such as congestion, runny nose, and sneezing.

THE NEUROMARK REGISTRY STUDY

This 3-year study involves up to 9 study appointments. 2–3 appointments will take place in an office setting while the remaining can be completed virtually. Follow-ups will be conducted at **3, 6, 12, 18, 24, 30, and 36 months** post-procedure.

About the treatment

The NEUROMARK System is a non-invasive handheld medical device designed to deliver energy to the inside of your nose aimed at interrupting nasal nerves to reduce symptoms related to Chronic Rhinitis.

The procedure, which can be performed using local anesthesia, will be administered to both nasal cavities by your ENT physician.

About study participation

To qualify to participate in the NEUROMARK Registry Study, you must:
